

NOTES: Dimensions based on traverse by Ayres Associates for C.T.H. "C". Bearings are referenced to the West line of the NW 1/4 of Section 29 which is assumed to bear N 0°00' E. Corner forms have been filed in the County Surveyors records for all monumented corners shown hereon. Former surveyor Kelly made a note on several corner forms in this area that make mention of a survey in the 1970's by Wisconsin Public Service Corp. (WPS). I recently spoke with a field representative from WPS. He indicated that any survey work they did was only preliminary work for a proposed power line route in the area. They did not set any section corners. This route was later abandoned. Any points they set were only traverse points, usually located at the approximate location for the section or quarter corners.
